

# SIHI<sup>prime</sup> - Side Channel Pumps

Self-priming, segmental type

AEH-X 1201 ... 3608

## TECHNICAL DATA

Capacity:	from 0.4 up to 7.5 m <sup>3</sup> /h
Delivery head:	from 10 up to 312 m
Speed:	1450 rpm (max. 1800 rpm)
Temperature:	max. 120 °C max. 180 °C for high temperature design (higher temperatures on request)
Casing pressure:	PN 40
Shaft sealing:	mechanical seal
Flange connections:	DIN 2501 / PN 40
Direction of rotation:	clockwise (when seen from the drive end)
Protection classification:	Ex II2 Gc T1-T5

## APPLICATION

The Sterling SIHI AEH-X pump is a self-priming side channel pump capable of handling gas along with the medium and operates at a low noise level.

The AEH-X pumps, as per DIN EN 734, are used for problem-free pumping of clean liquids at unfavourable suction side conditions. (condensates, corrosive liquids, ...).

Different material possibilities with uniform dimensions and performance characteristics as well as the standard exchangeable components are used for the construction. The AEH-X pumps are particularly recommendable in a wide application range in many sectors such as:

- Chemical industry,
- Petro-Chemical industry,
- Pharmaceutical industry,
- Oil industry,
- Food industry,
- OEM.

## DESIGN

The pumps of the SIHI<sup>prime</sup> range are side channel pumps having segmental type construction.

The program comprises, currently, 3 sizes each with 1-8 stages. The existing material design allows an optimum rating for the respectively desired performance range and the pumping medium.

The applied hydraulic components are from our modular side channel system (interchangeability of parts).

## CONSTRUCTION

### Casing pressure

Maximum 40 bar from - 40 °C up to +120 °C.

Maximum 32 bar from +120 °C up to +180 °C.

Pressure stages for temperature as per DIN EN 1333.

### Please observe

Technical rules and safety regulations:

Casing pressure = inlet pressure + delivery head at minimum pump capacity.

### Position of branches

Suction and discharge branch point radially upwards.

### Flanges

Flanges in accordance with DIN EN 1092-2 / PN 40.

Flange design as per DIN 2512 with groove or drilled according to ANSI 150 or 300 lbs is basically possible.

### Bearing

Either by a ball bearing and a liquid surrounded sleeve bearing (design A) or by two ball bearings (design B). The ball bearings are according to DIN 625 and greased for life.

### Rotation direction

Clockwise, when looking at the pump from the drive end.  
Anti-clockwise is possible.

### Shaft sealing

The shaft is sealed by a mechanical seal according to DIN EN 12756, with quench connection.

The shaft sealing is also available in a design suitable for heating or cooling of the mechanical seal and a double mechanical seal (back-to-back as well as tandem) design is possible on request.

# AEH-X

## Material design

Pos.	Components	Material design		
		GS Cast Iron / GL Cast Iron	TN	Stainless steel
2350	Vane wheel impeller	G-X 3 CrNiMoCuN 26 6 3 3	CuZn40Al2	G-X 3 CrNiMoCuN 26 6 3 3

1510	Shell casing			G-X5 CrNiMoNb 18 10
1090	First suction intermediate			
1140	Side channel intermediate	EN-GJL-250		
1141	Last discharge intermediate			
1600	Cover plate (design A)			
2100	Shaft	X 20 Cr 13		X 5 CrNiMo 17 12 2
4410	Mechanical seal casing			
4420	Cooling casing			
3600	Open bearing cover		EN-GJS-400-18-LT	
3610	Closed bearing cover (design B)			
5451	Bearing bush (design A)		CY 10 C / Antimony carbon*	

\* Bearing bush in Antimony Carbon is only used in high temperature design.

## Casing seal

The casing sealing is done by o-ring gaskets compatible with the handled medium.

## Drive

By electric motor, type of construction IM B3. According to the area of usage, we can supply motors of any kind of protection (EExe, EExd).

## General comments

Side Channel pumps with the same hydraulic construction are manufactured in series as:

**AOHA** Low duty pump with oval flanges, PN 10

**AKH-X** Medium duty pump, PN 25

**CEBA** Vertical pump, PN 25 with magnetic coupling

**CEH-X** High duty pump combined with a low NPSH stage, PN 40

**AEH and CEH pumps are available in magnetic coupling design.**

**Note:** For hydraulic sizes from 4101 to 6108 please see catalogue **AEH PII/11** (133.41301.57.01 E).

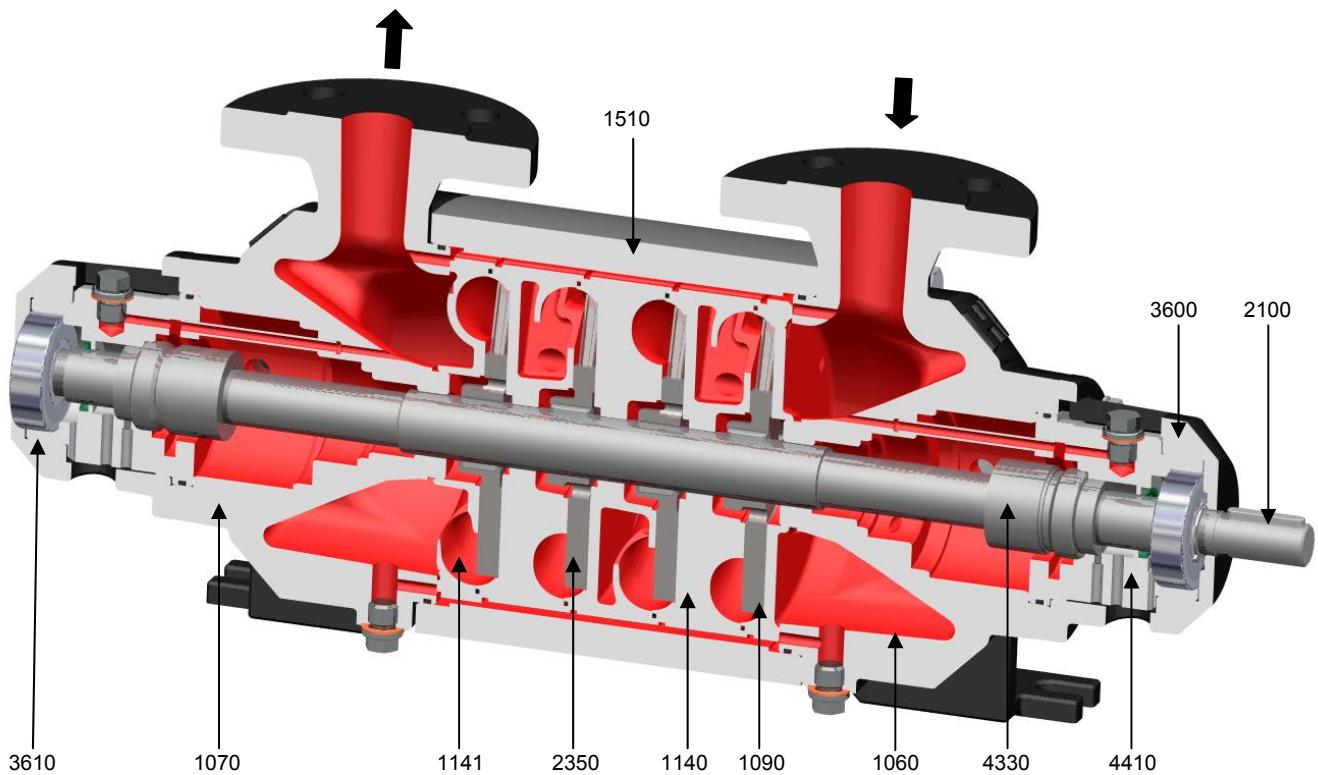

Technical documents about these pumps will be readily supplied on request

## Sensor for Condition Monitoring

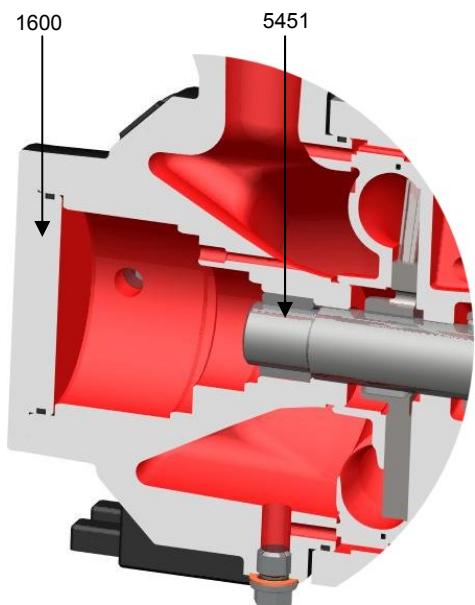

The **SIHI<sup>detect</sup>** sensor is the ideal solution for **vibration velocity** measuring and for pump **condition monitoring** for example to detect bearing wear, unbalance, misalignment, unacceptable pipeline forces, cavitation, etc. This sensor is suitable for all liquid and vacuum pumps and the main features are:

- Simple to connect
- Universal use
- Visual check via LED display
- Easy Installation
- Also available as non Ex version

# AEH-X

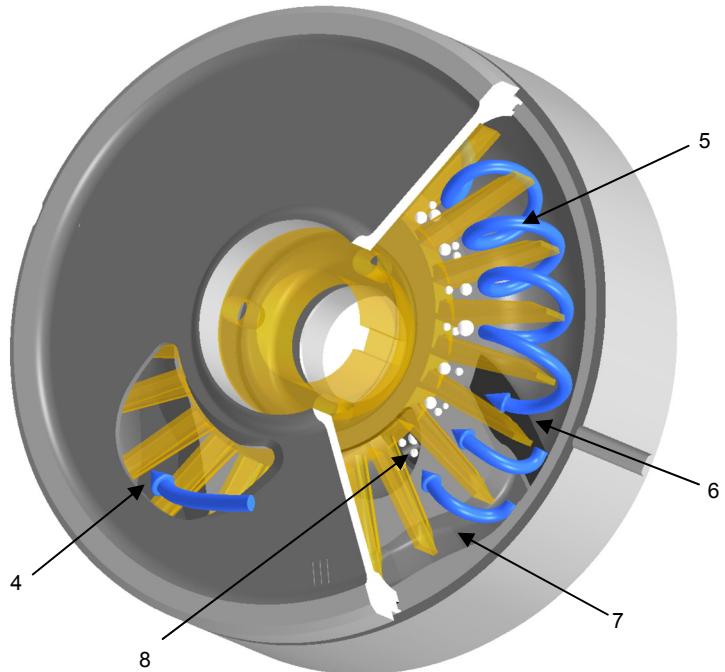

## Operating principle

The AEH-X pump is a side channel system, self priming, and segmental type.

A side channel stage consists of:

- A suction intermediate part (1),
- A discharge intermediate part including the side channel (2),
- A vane wheel impeller located between the 2 intermediate parts (3).

The fluid entrance goes through the suction hole (4). The turning of the vane wheel impeller creates an under pressure at the beginning of the side channel and the liquid (with or without gas) is drawn in. The pressure generating is obtained by the repetitive re-entering of the liquid in the side channel (5). The liquid goes then to the next stage through the discharge hole (6). The air displacement channel (7) provokes a positive displacement effect so the gas remaining at the root of the vane wheel impeller is forced out through the gas slot (8).

A side channel pump can de-aerate and degas the suction line by itself and is thus very suitable for suction lift operation. A side channel pump can handle large quantities of (entrained) gas. Mixtures up to a gas share of 50% are possible. The ability for self-priming and the handling of large amounts of (entrained) gas will guarantee continuous operation even in case of evaporation and therefore contribute to a higher level of safety in industrial processes.

To avoid cavitation the distance between the liquid level and the entrance at the suction side of the pump is restricted. This distance is related to the NPSH or Net Positive Suction Head. This makes the AEH-X very suitable for pumping liquids near their boiling point at reasonable economic expenses.

## Performance range

### General conditions

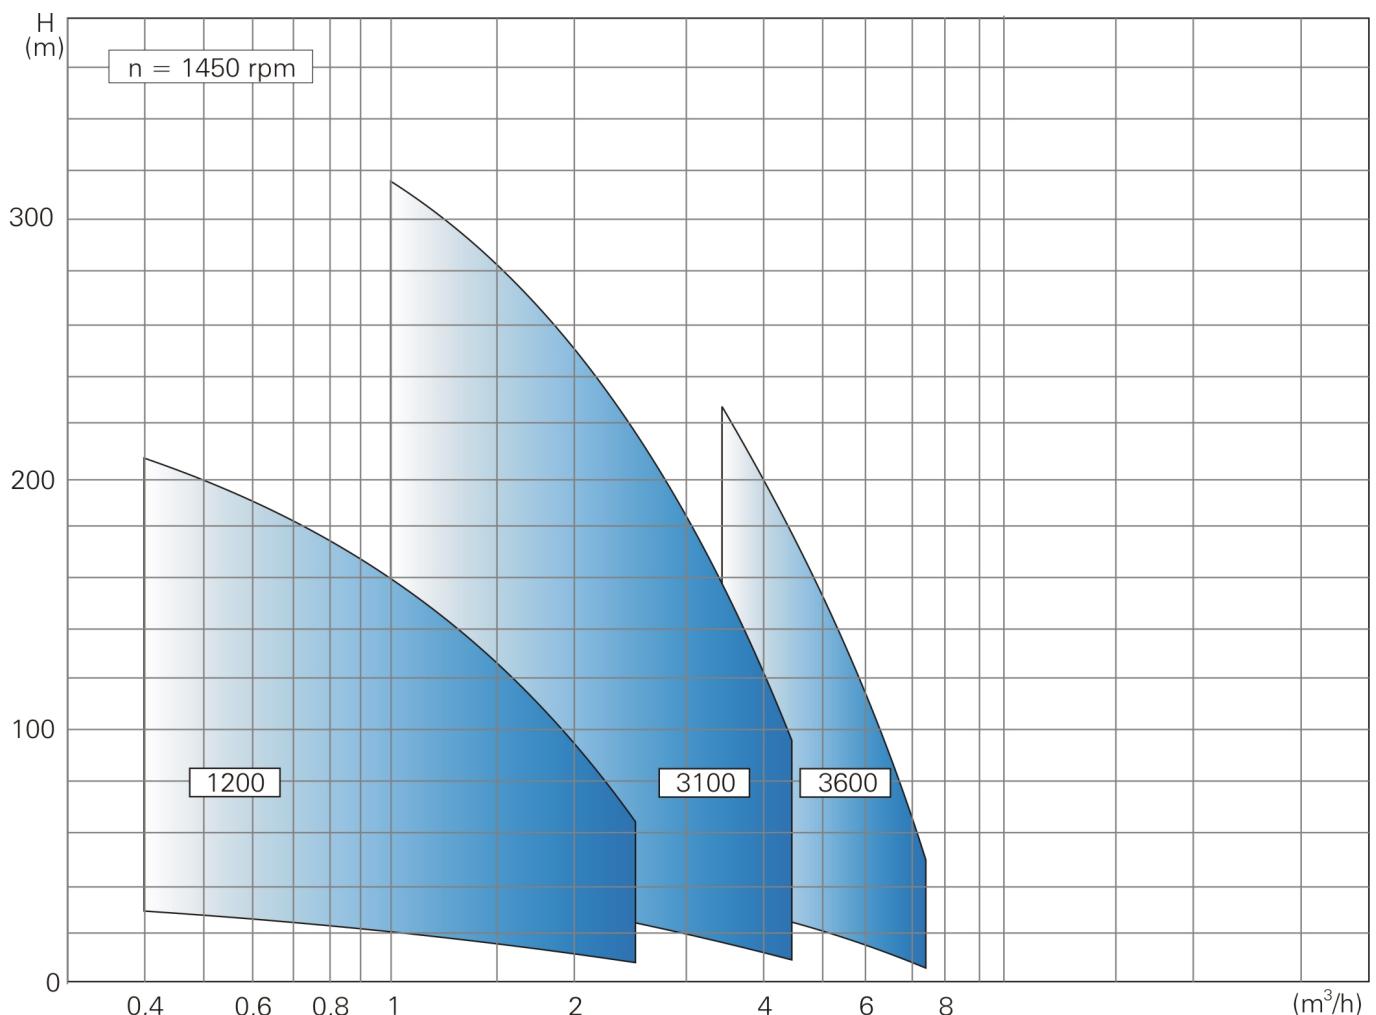

Liquid:	Water
Density:	1 kg/dm <sup>3</sup>
Viscosity:	1 cSt
Temperature:	20 °C
Atmospheric pressure:	1013 mbar

### Characteristic tolerances

The Side Channel pumps are not submitted to any normalized test tolerances. Here under are our acceptance values:  
Capacity ± 9% - Delivery head ± 7% - Power + 10%.

### Measuring standard

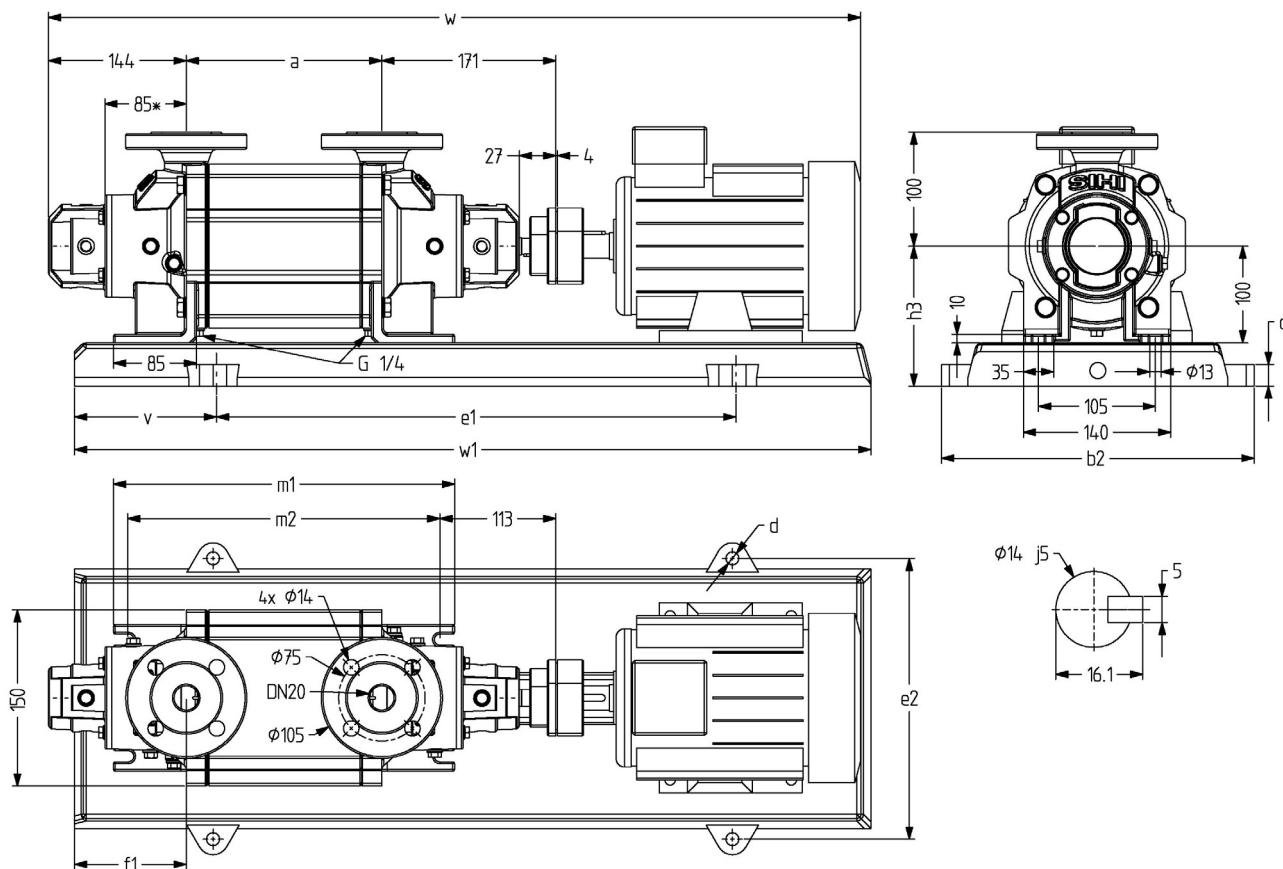

According to ISO 5198.
