

Liquid ring compressors

KPH 55206, KPH 55209

Compression pressures: 2 to 7 bar
Suction volume flow: 86 to 170 m³/h

CONSTRUCTION TYPE

Sterling SIHI liquid ring compressors are displacement compressors of simple and robust construction having following special characteristics:

- Pumping of nearly all gases and vapours
- non polluting due to a nearly isothermal compression
- oil-free, as no lubrication in the working chamber
- small quantities of entrained liquid can be handled
- easy maintenance and reliable operation
- low noise and nearly free from vibration
- wide choice of material, therefore applicable nearly anywhere
- no metallic contact of the rotating parts

The Sterling SIHI liquid ring compressors KPH 55000 are two stage compressors, with double acting second stage.

NOTE

During the operation the compressor must continuously be supplied with service liquid, normally water, in order to eliminate the heat resulting from the gas compression and to replenish the liquid ring, because part of the liquid is leaving the pump together with the gas. This liquid can be separated from the gas in a pressure liquid separator (see catalogue part accessories). It is possible to reuse the service liquid. The direction of rotation is clockwise when looking from the drive on the pump.

ANWENDUNG

Every application where pumping gas has to be compressed carefully to a pressure of abt. 6,5 bar and only a small increase in temperature is admissible;
e.g. recovery of solvent or vinyl chloride vapour.

GENERAL TECHNICAL DATA

	unit	KPH 55206	KPH 55209
Speed 50 Hz 60 Hz	rpm	2900 3500	
Max. compression over pressure	bar	7,5	
Hydraulic test (over pressure)	bar	11,5	
Moment of inertial of the rotating pump parts and of the water filling	kg · m ²	0,04	0,055
Sound pressure level of measuring area	dB (A)	68 ... 70	
Min. pulley diameter permissible in case of V-belt drive	mm	180	on request
Max. gas temperature	°C	100	
Service liquid			
max. admissible temperature	°C	80	
max. viscosity	mm ² /s	90	
max. density	kg/m ³	1200	
volume up to shaft level	liter	3,5	4

The combination of several limiting values is not admissible.

Material design

Item	COMPONENTS	MATERIAL DESIGN	
		01	42

Suction volume flow and power absorption KPH 55206

The values indicated for volume and power absorption are valid for compression of dry air at 20°C from atmospheric pressure (1013 mbar) of the respective compression pressure with water at 20°C as service liquid. Tolerance of the curve values is 10%. The compression pressure in bar is indicated as pressure above the atmospheric pressure.

The data indicated change with deviating service conditions, such as deviating physical data of the gas to be handled or of the service liquid (vapour pressure, temperature, density, viscosity) when handling entrained liquid, at a suction pressure deviating from atmospheric pressure handling gas-vapours mixtures.

For determination of service data for deviating service conditions please see catalogue section TH.

Suction pressure and power absorption KPH 55209

The values indicated for volume and power absorption are valid for compression of dry air at 20°C from atmospheric pressure (1013 mbar) of the respective compression pressure with water at 20°C as service liquid. Tolerance of the curve values is 10%. The compression pressure in bar is indicated as pressure above the atmospheric pressure.

The data indicated change with deviating service conditions, such as deviating physical data of the gas to be handled or of the service liquid (vapour pressure, temperature, density, viscosity) when handling entrained liquid, at a suction pressure deviating from atmospheric pressure handling gas-vapours mixtures.

For determination of service data for deviating service conditions please see catalogue section TH.
