

Liquid ring vacuum pumps

single-stage

LOH 20103, LOH 20107

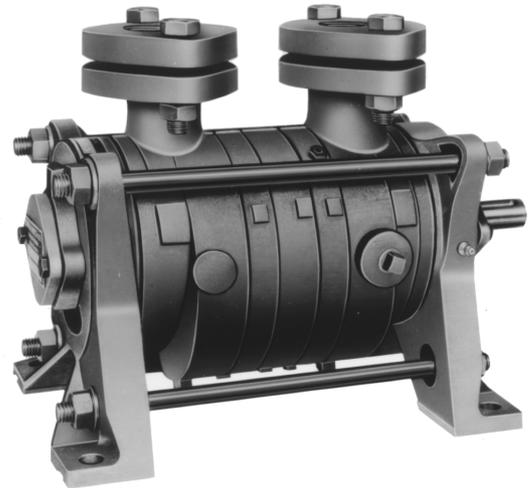

Pressure range: 150 to 1013 mbar
Suction volume flow: 7 to 58 m³/h

CONSTRUCTION TYPE

Sterling SIHI liquid ring vacuum pumps are displacement pumps of uncomplicated and robust construction with the following particular features:

- handling of nearly all gases and vapours
- non-polluting due to nearly isothermal compression
- oil-free, as no lubrication in the working chamber
- small quantities of entrained liquid can be handled
- easy maintenance and reliable
- Low noise and nearly free from vibration
- wide choice of material, therefore applicable nearly everywhere
- incorporated central drain
- no metallic contact of the rotating parts

The Sterling SIHI liquid ring vacuum pumps LOH 20103 and LOH 20107 are single-stage ones. They can be applied without modification as compressors up to a compression pressure of 1 bar (see catalogue part K).

APPLICATION

Handling and exhausting of dry and humid gases; entrained liquid can be handled during normal duty. The pumps are applied in all fields where a pressure of 150 to 900 mbar must be created by robust vacuum pumps.

Fields of application are for example:

- chemistry and pharmacy for distilling and degassing,
- electric industry for impregnation and drying
- plastics industry for degassing etc.

NOTE

During operation the pump must be continuously supplied with service liquid, normally water, in order to eliminate the heat resulting from gas compression and in order to replenish the liquid ring, because part of the liquid is leaving the pump together with the gas. This liquid can be separated from the gas in a liquid separator (see catalogue part accessories).

Reuse of the service liquid is possible.

The direction of rotation of the pump is clockwise when looking from the drive on the pump.

GENERAL TECHNICAL DATA

		Unit	LOH 20103	LOH 20107
Speed	50 Hz	rpm	2800 ¹⁾	2800 ¹⁾
	60 Hz		3400	3400
Max. compression over pressure		bar	1	
Max. admissible pressure difference		bar	1,5	
Hydraulic test (over pressure)		bar	3	
Moment of inertial of the rotating pump parts and of the water filling		kg · m ²	0,0033	0,005
Sound pressure level at a suction pressure of 200 mbar		dB (A)	66	67
Min. pulley diameter permissible in case of V-belt drive		mm	80	
		°C	240	
Max. gas temperature	dry	°C	120	
	saturated			
Service liquid	max. admissible temperature	°C	100	
	max. viscosity	mm ² /s	90	
	max. density	kg/m ³	1200	
	volume up to shaft level	liter	0,9	1,0
Max. flow resistance of heat exchanger		bar	0,2	

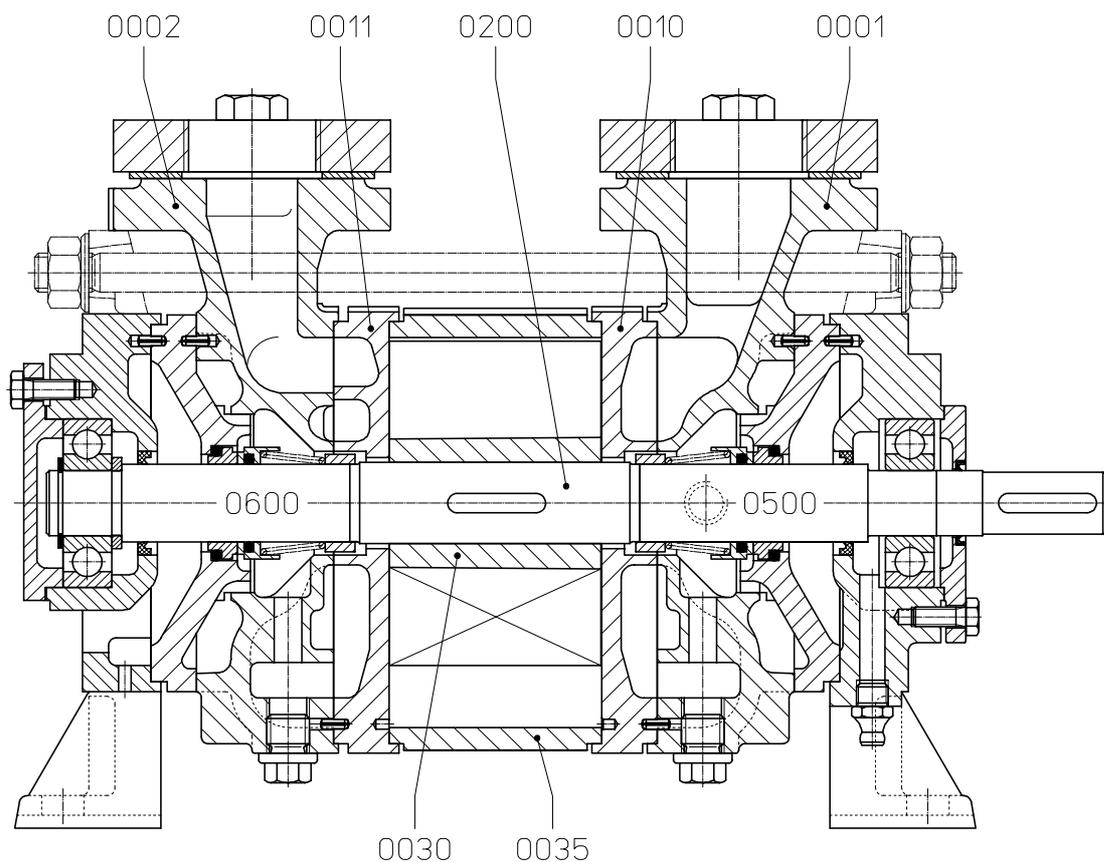

The combination of several limiting values is not admissible.

¹⁾ normal speed

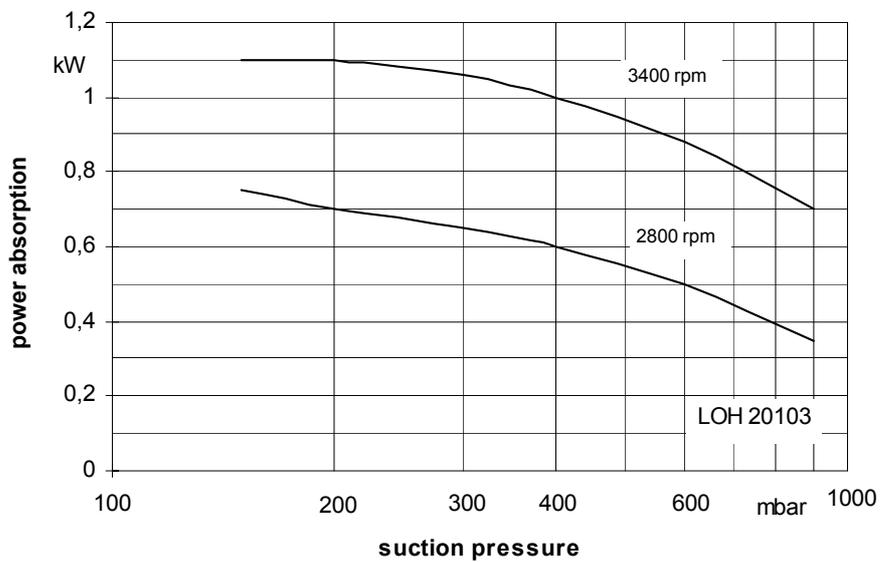

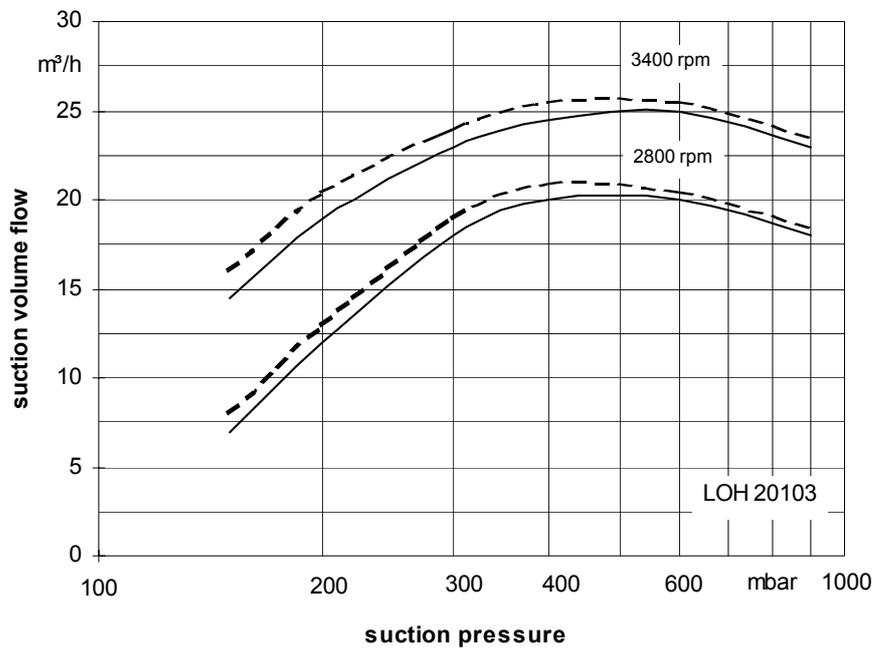

Material design

Item	COMPONENTS	MATERIAL DESIGN		
		01	02	42
0001, 0002	casing	0.6025		1.4408
0010, 0011	intermediate piece	0.6025		1.4408
0030	vane wheel impeller	RG 9	1.4027.05	1.4517
0035	central body	1.0570		1.4581
0200	shaft	1.4021		1.4401
0500, 0600	mechanical seal	Cr-steel / carbon / Perbunan		Cr Ni Mo-steel / carbon / Viton

Sectional drawing LOH 20103, LOH 20107

Suction volume flow and power absorption LOH 20103

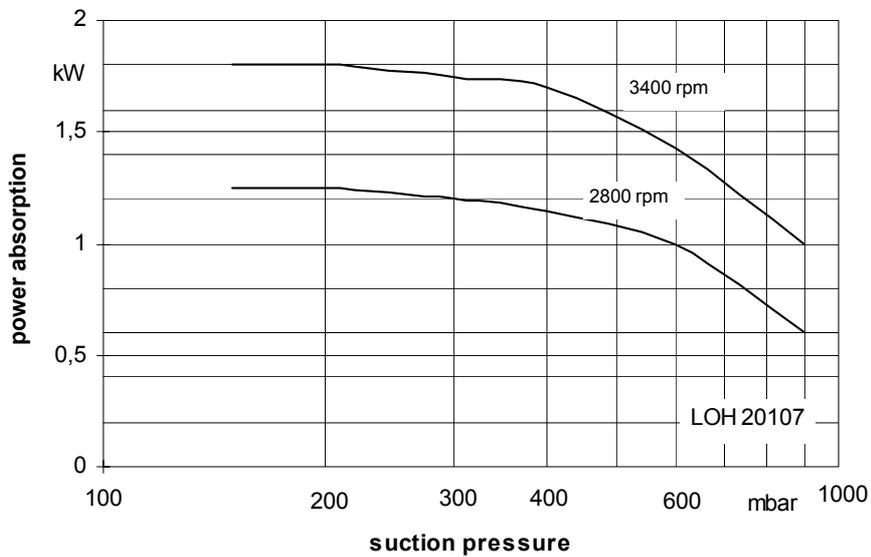

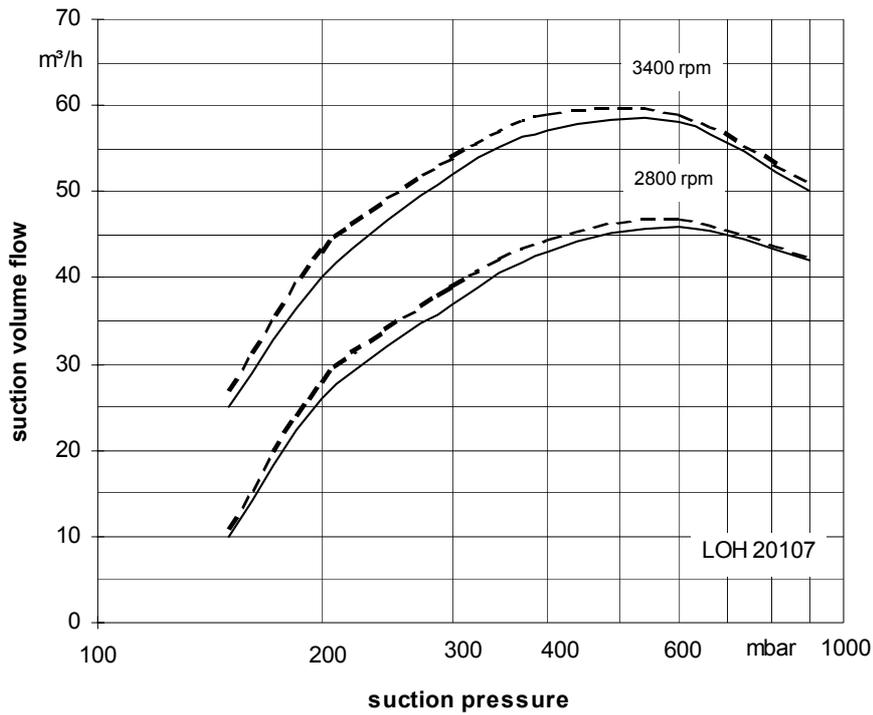

The operating data are applicable under the following conditions:

- pumping medium:
 - dry air: 20°C —————
 - water vapour saturated air: 20°C - - - - -
- service liquid:
 - water: 15°C

Compression pressure 1013 mbar (atmospheric pressure)
 The suction volume flow is applied to the suction pressure
 Tolerance of the operating data 10% and of the power absorption 5%.
 Max. fresh requirement at lowest suction pressure

Suction volume flow and power absorption LOH 20107

The operating data are applicable under the following conditions:

- pumping medium:
 - dry air: 20°C —————
 - water vapour saturated air: 20°C - - - - -
- service liquid:
 - water: 15°C

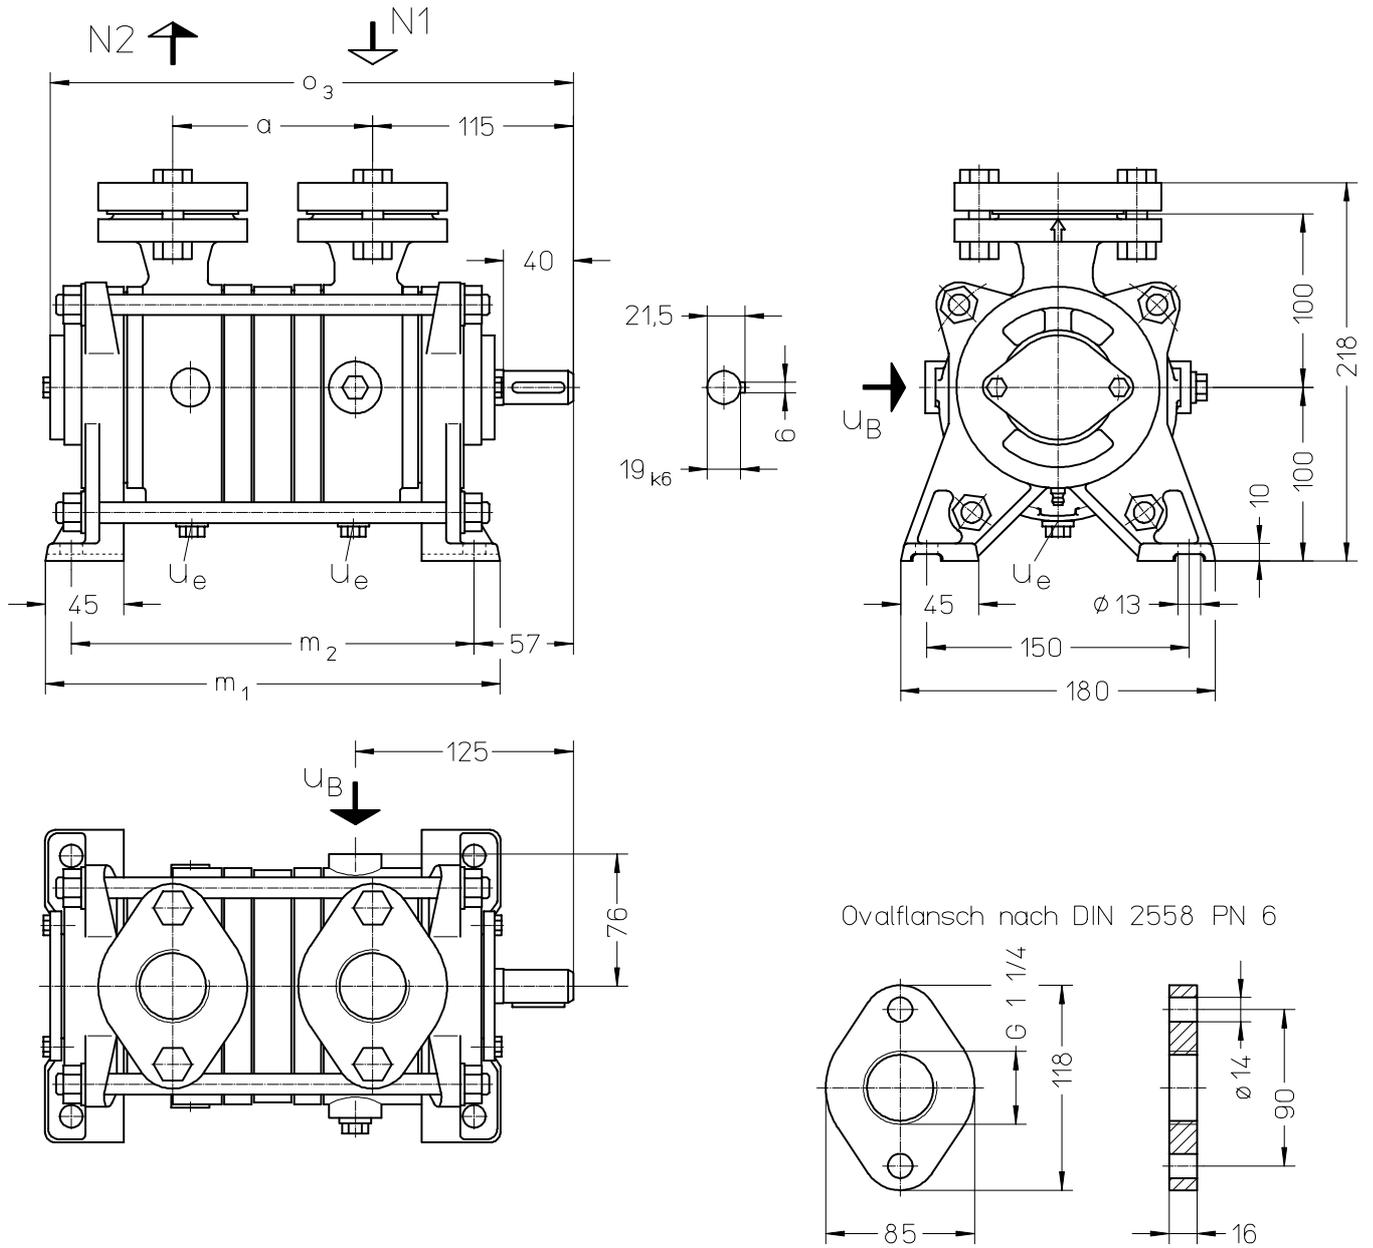

Compression pressure 1013 mbar (atmospheric pressure)

The suction volume flow is applied to the suction pressure.

Tolerance of the operating data 10% and of the power absorption 5%.

Max. fresh water requirement at lowest suction pressure.
